

Building the Smart Grid Value Chain

May 27 at 9:15am to 10:00am

Taking a legacy grid and extending and enhancing it to embrace Smart Grid technologies and a consumer orientation are big, complex, multi-phase jobs that require a compelling and dominant vision with individual, organizational, and societal benefits. How can we make this vision a reality, today?

Reaching out to consumers, understanding how to design, sell and support Smart Grid solutions will go a long way to answering this vital question. Resolving gaps such as the full potential of wireless solutions and overcoming critical concerns of cyber security are other key aspects that need to be addressed to make the Smart Grid vision a reality with broad beneficial impacts.
